LR transforms on conv's applied LR (BS 2000, baseline 0.22 -> 0 over 200 steps)
ramp: x 4^(2x-1), x0.25 -> x4
applied LR if the schedule is left unchanged
schedule a search must find
wave: x 2^sin(2 pi x), up first
reverse ramp: x 0.25^(2x-1), x4 -> x0.25
inverted wave: x 2^sin(2 pi (x+1/2)), down first (held back)
steep ramp: x 8^(2x-1), x1/8 -> x8 (held back)
multiplier

baseline (target)
baseline schedule, transformed
oracle: baseline / multiplier
its 5 interval means on the x0.6 grid
